

Introducing one of our *Cool Companies*[®]

In a land dominated by oil and gas, this new *Cool Companies*[®] book has a surprise:

Alberta has a clean technology industry.

On top of that, the calibre of companies in it will make you think, "Wow...Cool," as demonstrated by the company featured below.

Designed for entrepreneurial-minded business leaders passionate about entrepreneurial opportunities and ideas, this new *Cool Companies*[®] book delivers a collection of innovation-driven companies pioneering their own space in the clean technology and green products industry. It also features the latest technologies and opportunities, cutting-edge research and proven industry supporters.

Titanium

Creating new value while reducing the environmental impact of oil sands tailings

In the process of extracting bitumen (a tar-like form of oil) from the oil sands, waste tailings are created. This waste is currently stored in huge outdoor tailings ponds to settle and is one of the largest environmental concerns for oil sands operations in northern Alberta. Titanium Corporation has created a technology that will recover valuable heavy minerals such as zircon, residual bitumen and solvent used in oil sands operations and water from oil sands waste tailings. This will result in a significant reduction in the environmental impact of the oil sands industry. The company is currently deploying its technology with some of the largest oil sands companies, including **Suncor**, **CNRL** and **Syncrude**.

COMPANY: Titanium Corporation Inc., www.titaniumcorporation.com, 20 employees and consultants, founded 2001, investor and grant funded, demonstration pilot complete summer 2011 then ready for commercialization, publicly traded on TSXV as **TIC**, Suite 1400, 10025 - 106th Street Edmonton, Alberta T5J 1G4, 780.760.0512

PRODUCT: Recovering minerals and bitumen from oil sands tailings
